

Ideation Phase
Define the Problem Statements

Date	28-06-2026
Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An IT Operations Manager overseeing infrastructure and resource allocation.	Optimize my network engineering team's bandwidth and lower overall operational turnaround times (MTTR).	Highly skilled engineers are constantly bogged down by repetitive, routine ticketing tasks.	The lack of an automated fulfillment engine requires manual intervention for every single standard network change.	Frustrated by the waste of engineering talent and concerned about scaling operational bottlenecks.

PS-2	A Cybersecurity Compliance Officer responsible for enterprise risk management.	Ensure every network configuration change is strictly vetted, authorized, and perfectly documented for security audits.	I cannot easily verify if every active firewall rule or IP allocation went through the proper approval chain.	The current manual process creates fragmented audit trails scattered across emails and offline chats rather than an immutable, centralized log.	Exposed to severe security vulnerabilities and highly vulnerable to compliance penalties.
