

Ideation Phase

Empathize & Discover

Date	28-06-2026
Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Empathy Map:

Persona 1: The End-User (e.g., Frontend Developer)

Says & Thinks

- **Says:** *"I just need port 443 open for an API. Why does a simple request take four days and three follow-up emails?"*
- **Says:** *"I don't know which form to choose or what technical subnet details they want from me."*
- **Thinks:** *"The network team is a black box. I drop my request in, and I have no idea if anyone is even looking at it."*
- **Thinks:** *"This manual process is going to make me miss my deployment deadline."*

Sees

- A fragmented ticketing system with no clear category for specific network requests.
- Radio silence on their ticket status until they manually ping someone on Slack or email.
- Their project timeline slipping due to infrastructure bottlenecks.

Hears

- **From Management:** *"Why isn't the application live yet? We need to hit our launch target."*
- **From Peers:** *"Just submit the ticket early, the network team always takes forever to reply."*

Persona 2: The Fulfiller (e.g., Network Administrator)

Says & Thinks

- **Says:** *"Half the tickets I get are missing basic information like source IPs or proper business justifications."*
- **Says:** *"I spent half my day manually copying and pasting IP rules into firewalls instead of working on our core architecture."*
- **Thinks:** *"If I make a typo in this manual configuration, I could accidentally cause a network outage."*

- **Thinks:** *"Preparing for the upcoming compliance audit is going to be a nightmare because our history is scattered across emails."*

Sees

- An endless queue of routine, repetitive tickets piling up daily.
- Incomplete request forms submitted through loose chat messages, emails, and generic tickets.
- An outdated or disconnected CMDB that requires manual updates after every configuration change.

Hears

- **From Users:** *"Can you please escalate this ticket? It's urgent!"*
- **From Auditors:** *"Where is the authorized manager approval signature and validation log for this specific firewall change?"*

Pain & Gain Analysis

Category	Details
Pain (Fears, Frustrations, Obstacles)	Deadlines at risk, lack of transparency, and frustrating back-and-forth clarification emails.(Persona 1) Ticket burnout, high risk of human error from manual entry, and stressful, unorganized audit trails.(Persona 2)

Gain (Wants, Needs, Success Measures)	A simple self-service portal, instant automated approvals for low-risk changes, and zero-touch delivery.(Persona 1) Automated data validation at intake, direct API-driven execution via ServiceNow, and a perfectly tracked, audit-ready system.(Persona 2)
